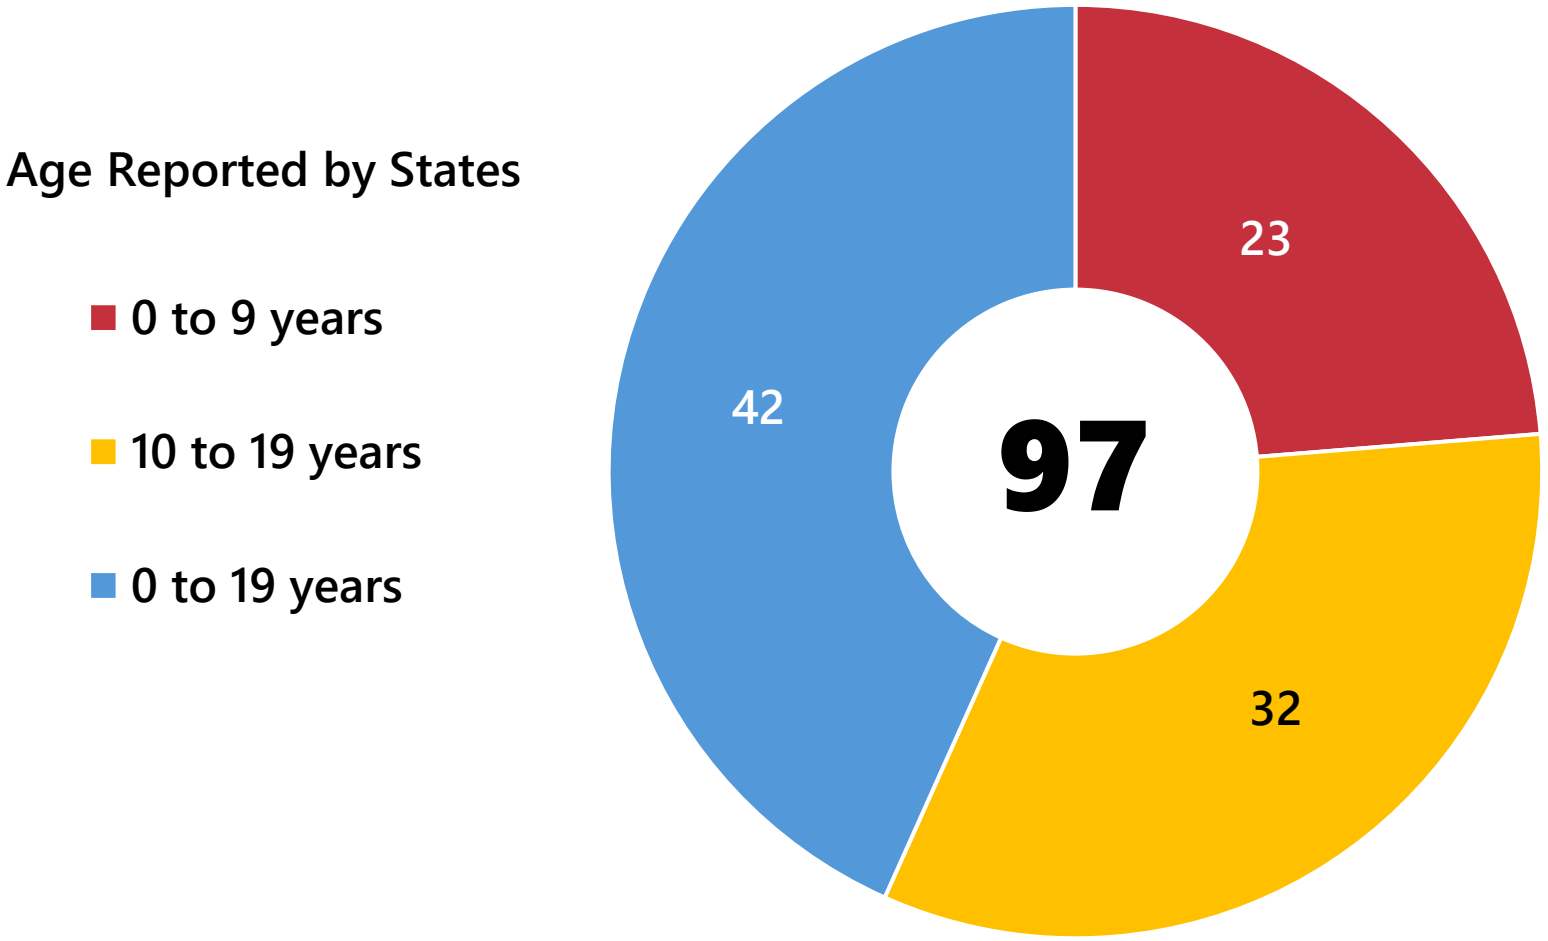
Child and Teen Deaths from COVID-19 in the United States

Updated August 4, 2020



Note: Death counts are cumulative. The latest available data were abstracted from each state health department coronavirus website and credible news sources on August 4, 2020. Not all states reported deaths for children. Several Texas deaths are newly reported by the state health department, but occurred at earlier dates. Data are preliminary and subject to change. Age range varied by state and was either 0-17 or 0-19 years.
